                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1, Application US/09860761

Patent No. 6627402

GENERAL INFORMATION:

APPLICANT: Wallace, R. Bruce

IITLE OF INVENTION: Method of Detecting and

Discriminating Between Nucleic Acid Sequences
                                                                                                                                                                                                                  .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 6, Application US/08452055
Patent No. 5705627
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Bauer, Catherine E.
APPLICANT: Manos, Michele
APPLICANT: Resnick, Robert M.
APPLICANT: Ting, Yi
TITLE OF INVENTION: Detection of Human Papillomavirus by the TITLE OF INVENTION: Polymerase Chain Reaction
NUMBER OF SEQUENCES: 85
CORRESPONDENCE ADDRESS:
  Impraim, Chaka C.
Manos, M. Michele
Resnick, Robert M.
VENTION: Detection of Human Papillomavirus by the
VENTION: Polymerase Chain Reaction
EQUENCES: 298
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match 1.7%; Score 14.2; DB 1; Length 20; Best Local Similarity 84.2%; Pred. Sequence 1222, Application US/09198452A

Batent No. 6559294

GENERAL INFORMATION:
TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments
TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, prever
TITLE OF INVENTION: and treatment of infection
TITLE OF INVENTION: and treatment of infection
FILE REFERENCE: 9710-003-999

CURRENT APPLICATION NUMBER: US/09/198,452A

CURRENT FILING DATE: 1998-11-24

NUMBER OF SEQ ID NOS: 6849

                                                                                                                                                                                                                                                       RESULT 61
US-09-198-452A-3333/c
Sequence 3333, Application US/09198452A
Patent No. 655294
GENERAL INFORMATION:
APPLICANT: GTIffais, R.
TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, prevering of INVENTION and treatment of infection
TITLE OF INVENTION: and treatment of infection
TITLE OF INVENTION: 1999-11-24
CURRENT APPLICATION NUMBER: US/09/198,452A
CURRENT APPLICATION NUMBER: US/09/198,452A
CURRENT PILING DATE: 1998-11-24
NUMBER OF SEQ ID NOS: 6849

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 68, Application US/09290640

Patent No. 6204055

GENERAL INFORMATION:
APPLICANT: Dear, Nicholas M.
APPLICANT: Marcusson, Eric G.
TITLE OF INVENTION: Antisense Compound Modulation of Fas Mediated Signaling
FILE REPRENCE: ISPH-0351
CURRENT APPLICATION NUMBER: US/09/290,640
CURRENT FILING DATE: 1999-04-12
NUMBER OF SEQ ID NOS: 85
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 68
LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 18, Application US/09043711

Sequence 18, Application US/09043711

Patent No. 6221365

GENERAL INFORMATION:
APPLICANT: Jones, Kevin F.
APPLICANT: Jones, Kevin F.
APPLICANT: Ooi, Peggy
TITLE OF INVENTION: The NucA Protein of Haemophilus
TITLE OF INVENTION: influenzae and the Gene Encoding That Protein
NUMBER OF SEQUENCES: 23
CORRESPONDENCE ADDRESS:
ADDRESSEE: American Cyanamid Company
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 14, Application US/09026033
Sequence 14, Application US/09026033
Patent No. 6368791
GENERAL INFORMATION:
APPLICANT: Felix, Carolyn A.
APPLICANT: Rappaport, Eric
TITLE OF INVENTION: METHOD AND KITS FOR ANALYSIS OF
TITLE OF INVENTION: CHROMOSOMAL REARRANGEMENTS ASSOCIATED WITH LEUKEMIA
NUMBER OF SEQUENCES: 23
GENERAL INFORMATION:
APPLICANT: No. 6331407ak, Rodger
APPLICANT: No. 6331407ak, Rodger
TITLE OF INVENTION: Blaine
TITLE OF INVENTION: NOVEL ANTIBIOTICS AND METHODS OF USING THE SAME
FILE REFERENCE: 1340-1-016N1
CURRENT APPLICATION NUMBER: US/09/305,984B
CURRENT FILING DATE: 1999-05-05
EARLIER PILING DATE: 1998-05-06
EARLIER FILING DATE: 1999-05-05
NUMBER OF SEQ ID NOS: 76
SOFTWARE: PAPELICATION VET. 2.0
SOFTWARE: PAPELICATION VET. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .

Sequence 69, Application US/09665615B

Patent No. 6653133

GENERAL INFORMATION:
APPLICANT: Dean, Nicholas M.
APPLICANT: Watt, Jacqueline
TITLE OF INVENTION: Antisense Modulation of Fas Mediated Signaling
FILE REFERENCE: ISPH-0502

CURRENT APPLICATION NUMBER: US/09/665,615B

CURRENT APPLICATION NUMBER: US 09/290,640

PRIOR FILING DATE: 1999-04-12

PRIOR FILING DATE: 1999-04-12

NUMBER OF SEQ ID NOS: 179

SEQ ID NO 68

Patent No. 5925733

GENERAL INFORMATION:

APPLICANT: BOSCH, MARNIX

APPLICANT: GOSCH, WARNIX

TITLE OF INVENTION: ASSOCIATED WITH KAPOSI'S SARCOMA AND RETROPERITONEAL

TITLE OF INVENTION: FIRECOMATOSIS

NUMBER OF SEQUENCES: 122

CORRESPONDENCE ADDRESS:

ADDRESSEE: MORRISON & FOERSTER

STREET: 755 Page Mill Road

CITY: Palo Alto

STATE: California

COUNTRY: USA

TIPLE OF UND ADDRESS:

ADDRESSEE: MORRISON & FOERSTER

Patent No. 2856099

Patent No. 2856099

PAPLICANT: Loren Miraglia, Thomas Geiger,
APPLICANT: Clarence Frank Bennett and Nicholas M. Dean
TITLE OF INVENTION: Compositions and Methods for
TITLE OF INVENTION: Modulating Type I Interleukin-1 Receptor Expression
CORRESPONDENCE: 42

ADDRESSEE: Law Offices of Jane Massey Licata
STREET: 210 Lake Drive East, Suite 201

CITY: Cherry Hill
STATE: NJ

iSequence 3.2, Application US/09596248D

patent No. 6599727

GENERAL INFORMATION:
APPLICANT: Christenson, Erik
APPLICANT: Goldman, Phyllis S

APPLICANT: Goldman, Phyllis S

APPLICANT: McBligott, David L

TITLE OF INVENTION: Human Poly (ADP-Ribose) Polymerase 2 Materials and

TITLE OF INVENTION: Human Poly (ADP-Ribose) Polymerase 2 Materials and

TITLE OF INVENTION: Human Poly (ADP-Ribose) Polymerase 2 Materials and

TITLE OF INVENTION: Human Poly (ADP-Ribose) Polymerase 2 Materials and

TITLE OF INVENTION: Human Poly (ADP-Ribose) Polymerase 2 Materials and

TITLE OF INVENTION: Human Poly (ADP-Ribose) Polymerase 2 Materials and

TITLE OF INVENTION NUMBER: 6/139,543

PRIOR FILING DATE: 1999-06-16

PRIOR APPLICATION NUMBER: 6/139,543

PRIOR PILING DATE: 1999-06-16

NUMBER OF SEQ ID NOS: 68
